

**YOU'RE REQUIRED TO
PERFORM A RISK ANALYSIS**

**PERFORM IT THE
REQUIRED WAY**

Learn More About the Unparalleled Clearwater HIPAA Risk Analysis™ Software:

Powerful and Dynamic with a Proven Methodology.

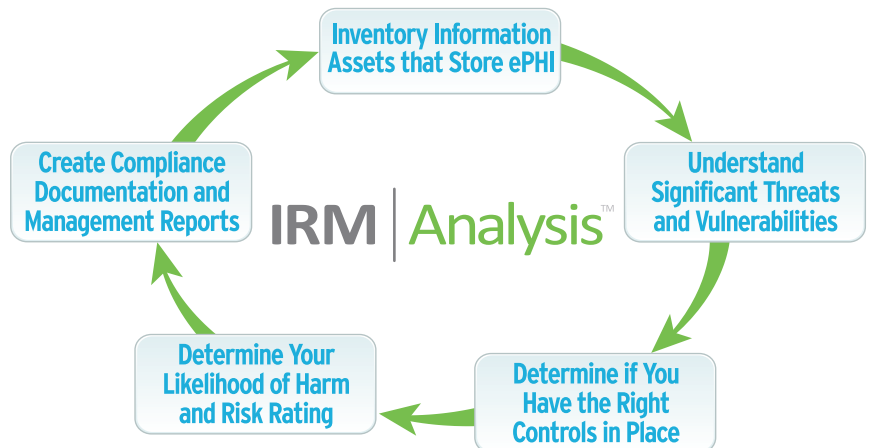

Current Climate

How would you fare in an OCR audit or investigation? Recent OCR findings reveal that most organizations investigated after an inadvertent data breach had not conducted a security risk analysis as required by the HIPAA Security Rule. The financial, legal, regulatory and reputational consequences of not conducting a formal risk analysis and taking steps to mitigate identified risks are dire! Are you struggling to find guidance, tools and methodology to conduct your security risk analysis?

The solution: Join the hundreds of organizations that have discovered compliance software developed specifically for healthcare that powers a formal, bona fide HIPAA security risk analysis – an explicit requirement within the Security Management Process Standard [45 CFR §164.308(a)(1)] of the HIPAA Security Final Rule.

Stage 1 and Stage 2 Meaningful Use also requires organizations to demonstrate they have conducted or reviewed a security risk analysis per 45 CFR §164.308(a)(1), have implemented security updates as necessary and have corrected identified security deficiencies as part of a risk management process.

Isn't it time to conduct an authentic HIPAA Security Risk Analysis with the Clearwater HIPAA Risk Analysis™ software?

As a former hospital CISO and current security practitioner, I've seen many approaches to meeting HIPAA risk analysis requirements. Finally, there's a SaaS solution extremely tightly tied to HHS/OCR/NIST guidelines. Very robust and comprehensive in controls coverage, yet easy to use.

Key Software Benefits

- **Be Confident Your Security Risk Analysis is By-the-Book:** This software provides an approach and methodology to meet HIPAA and Meaningful Use requirements. It strictly follows the HHS/OCR guidance for Security Risk Analysis and harnesses the power of the NIST risk assessment processes.
- **One-of-a-Kind Proprietary Software:** Powerful, proven methodology tailored for healthcare.
- **Record Where Your Sensitive Data Lives:** Take stock, maintain and readily present a complete repository about all your information assets used to create, receive, store or transmit electronic Protected Health Information.
- **Don't be Surprised by Threats:** View the hottest threats to your sensitive information, take the mystery out of identifying your vulnerabilities and create risk ratings.
- **Learn Recommended Controls:** Guard your data against identified threats and vulnerabilities with a tool that automatically presents the best controls recommended by experts to prevent the exposure of your sensitive data.
- **Measure Your Progress:** Capture a baseline for your current security risk profile and measure progress in reducing your risk score.
- **Operationalize Compliance:** The Clearwater HIPAA Risk Analysis™ software is a mature, repeatable and sustainable process.
- **On-Demand Reporting:** Display your top threats and informed recommendations for presentation to the C-Suite, auditors or potential clients.
- **Make Sound Decisions & Justify Investment Dollars:** Dynamic reports highlight specific security control deficiencies and enable the prioritization of security investments based on quantified weaknesses.
- **Cloud-Based Software:** The Clearwater HIPAA Risk Analysis™ software is cloud-based and does not require you incur hosting or maintenance costs.
- **De-Mystify a Complex Process:** Use a by-the-book approach to become self-sufficient in meeting the requirement to conduct a periodic security risk analysis.

Risk Rating Report

Asset	Threat Agent	Threat Action	Vulnerability	Likelihood	Impact	Rating
EMR - Smartphone	Burglar, Thief or anyone who finds a lost device	Access to sensitive data once in possession of the device	Vulnerabilities in user authentication	5	5	25
EMR - Smartphone	Burglar, Thief or anyone who finds a lost device	Access to sensitive data once in possession of the device	Vulnerabilities related to encryption of sensitive data	5	4	20
EMR - Smartphone	Burglary/Theft	Burglary/Theft	Physical Security vulnerabilities	3	4	12
